

IMBALKRAFT S.r.l.

company profile

HISTORY history

The history of fibre drums in Italy is the history of IMBALKRAFT and of its founder Aldo Campanini and his family's vision and entrepreneurial ability.

A company and a tradition strongly rooted in the territory but with an international approach and vision.

The technical skills developed in a 50 years activity still represent a solid expertise in the design and construction of plants for the production of kraft fibre drums. IMBALKRAFT is capable not only of supplying a product, but also and mainly the competence and technical support necessary for the research and development of solutions suitable for each customer and sector.

The research and development of innovative solutions have led us over time to be a reference point for the state of the art of fibre drums in Italy and abroad.

In order to guarantee high levels of service, flexibility and fast delivery to its customers, IMBALKRAFT has implemented 3 independent production lines dedicated to fibre drums.

HISTORY

history

1965 Aldo Campanini begins designing the technologies to produce fibre drums

1967 Aldo and Sergio Campanini founded IMBALKRAFT snc in Vimercate (MB), with a shareholder. The first production of fibre drums begins on a national scale creating the economic and ecological alternative to the wooden, iron and plastic drum

1977 Entrance of the second generation of Campanini family

1985 Beside the first production line a second line of fibre drums is designed, developed and manufactured in-house

1987 Acquisition of the entire IMBALKRAFT property by Campanini family

1995 Relocation of the production site in Bernareggio (MB) and extension of the production area to the current 5,000 sqm

1998 Development and construction of a third production line for fibre drums in order to meet the growing market demands and the need for greater flexibility and service level

2003 Entrance of the third generation of entrepreneurs from Campanini family

2006 Achievement of ISO 9001 certification

2011 Joined EIPA (European association of industrial packaging manufacturers) and SEFFI (European association of kraft fibre drum manufacturers)

2017 Anniversary of 50 years of activity

FIBRE DRUMS

Fibre drums

Fibre drum is a highly versatile and customizable kind of industrial packaging, suitable for containing solid products in powder, flakes, granules, paste or semi-liquid form

It represents a light and economical alternative to iron and plastic drums

Fibre drum provides high axial and radial mechanical resistance to static and dynamic compression, stacking and fall impact

It facilitates filling and emptying operations thanks to the full opening lid

A high coefficient of chemical, thermal and electrostatic inertia is provided

Fibre drum allows extreme customization in terms of size, materials, accessories, colors and external graphics

It simplifies separation and disposal

It is produced with renewable raw materials and low energy processes, with reduced CO2 emissions

SUSTAINABILITY

sustainability

Fibre drum is made of materials that are recyclable and sustainable for the environment.

KRAFTLINER is a paper chemically manufactured and therefore composed of long fibres, with remarkable performance, suitable for contact with food and recyclable over and over again as waste paper for new types of paper. It is obtained by cutting down trees planted for this purpose and then replanted, according to modern forest sustainable management systems

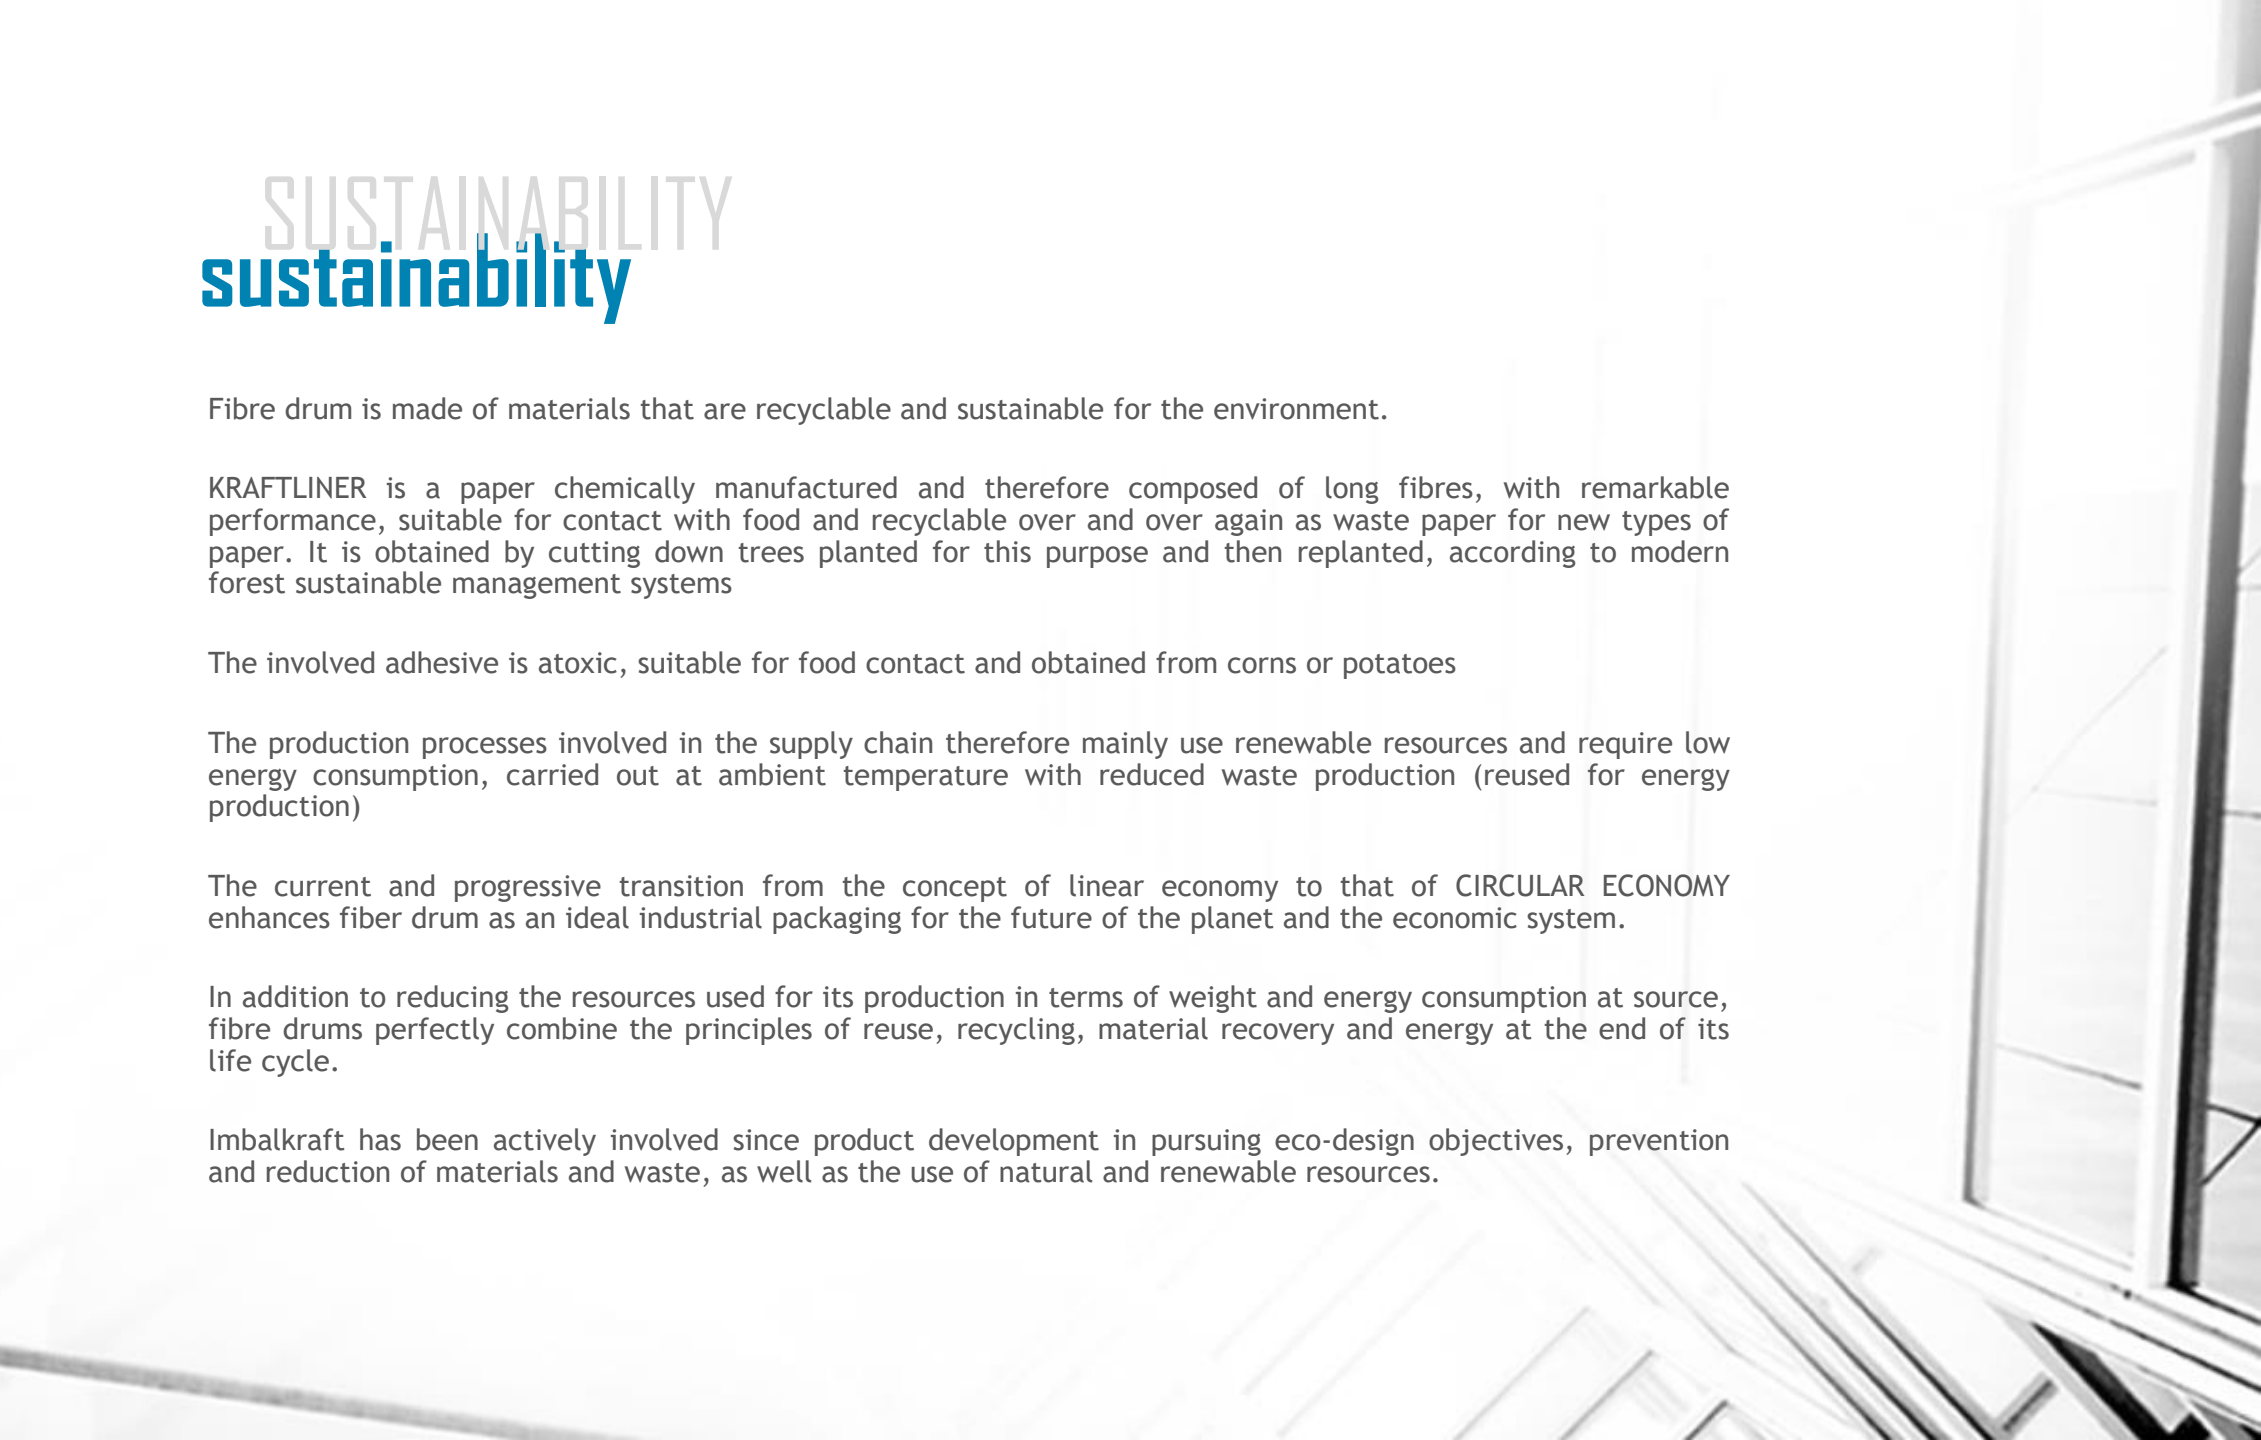

The involved adhesive is atoxic, suitable for food contact and obtained from corns or potatoes

The production processes involved in the supply chain therefore mainly use renewable resources and require low energy consumption, carried out at ambient temperature with reduced waste production (reused for energy production)

The current and progressive transition from the concept of linear economy to that of CIRCULAR ECONOMY enhances fiber drum as an ideal industrial packaging for the future of the planet and the economic system.

In addition to reducing the resources used for its production in terms of weight and energy consumption at source, fibre drums perfectly combine the principles of reuse, recycling, material recovery and energy at the end of its life cycle.

Imbalkraft has been actively involved since product development in pursuing eco-design objectives, prevention and reduction of materials and waste, as well as the use of natural and renewable resources.

PRODUCTION **production**

In order to guarantee maximum flexibility and service level, Imbalkraft features 3 complete and switchable production lines where it can manufacture all types and sizes of drums

The company is certified for quality according to ISO 9001:2008

Imbalkraft is a member of SEFFI - European Association of Fibre Drum Manufacturers
